[Computer Science](#)[Informatics](#)[English](#)**B.S. in Computer Science**

Requirements

The Bachelor of Science in Computer Science program includes a minimum of 122 credit hours of course work, including:

Core computer science courses (15 cr.)

Specialization courses (12-15 cr.) in your choice of artificial intelligence, data and search, foundations, programming languages, or systems

Computer science electives (13-17 cr.)

Required math courses (9 cr.)

General education and distribution requirements (39-44 cr.), including electives

One course is typically 3-4 credit hours. The degree requires a minimum of 45 hours of computer science course work; at least 26 credit hours in computer science must be above the 200 level.

For specific requirements, see the School of Informatics and Computing undergraduate academic bulletin (listed below). Students should pursue the requirements of the year that they entered IU Bloomington. The requirements outlined in the academic bulletin in effect at the time of your matriculation will remain the same throughout your time at the School of Informatics and Computing, assuming you graduate within eight years. Check the list of academic bulletins below to find the version you should use.

Your freshman course work will include major-specific courses, general education requirements, and electives you choose. Below is an example of a B.S. in Computer Science student's potential course schedule for the first year.

In planning your schedule, we recommend taking courses that both fulfill a requirement and satisfy your personal or professional interests. We also recommend consulting our academic advisors. They really know their stuff—they can even help you find that magic combination of classes that help you meet your core requirements, finish your specialization, and add a minor without tacking an extra semester to your studies.
